

## Sustainability Policy

Red7Marine understands and considers the sustainability of existing resources, and the natural environment, is of high importance to both the future of the business, the environment, & the community in which we live.

As such Red7Marine are committed to ensuring our business activities, whether onshore or offshore, shall be developed and managed such to ensure; whilst using our existing resources we do not compromise the availability of such resources to future generations.

Red7Marine are committed to:

- Promoting a positive & effective sustainability culture throughout the organisation;
- Repairing, preserving and enhancing the natural and man-made resources currently available to our business;
- Minimising waste generation by recycling and reusing;
- Considering alternatives to fossil fuels whenever an option;
- Development of our supply chains & procurement procedures to ensure the best sustainability practices are implemented throughout the procurement system;
- Procuring, maintaining & operating energy efficient equipment;
- Continually reviewing our management procedures to ensure best sustainability practice is implemented at all opportunities;
- Ensuring absolute compliance with appropriate legislation and regulations which also promote the sustainability of our resources;

This policy statement should be read in conjunction with our Environmental Policy Statement which shall also be used to promote & manage our sustainability objectives.
